🎓 EDUCATION

Hanoi Open University

Electronics & Telecom Engineering

2018 – 2023

PROFESSIONAL SUMMARY

Game Designer specializing in **puzzle and casual experiences**, with hands-on ability to turn ideas into playable Web and Mobile products. Designs core loops, mechanics, level structures, difficulty curves, progression, economy and player-facing UX. Uses **OpenAI Codex, ChatGPT and Claude Code** as an AI-first production workflow for rapid prototyping, design documentation, implementation, debugging and fast playtest-driven iteration.

WORK EXPERIENCE

Game Designer / AI-assisted Developer

TNG Technology, Media & AI Co., Ltd

08/2025 – Present

- Design and iterate puzzle/casual mechanics, core loops, levels and player flows for Web and Mobile.
- Translate product goals into feature specifications, wireframes, balancing rules and playable prototypes.
- Use AI tools throughout production to explore concepts, create documentation, implement prototypes and accelerate iteration.
- Plan and tune difficulty, progression, objectives, rewards and gameplay feedback through hands-on playtesting.
- Build production-ready gameplay systems in Phaser 3 and Godot, including save/load, inventory, quests and progression.
- Collaborate with Artists and QA to validate usability, resolve issues and ship polished iterations.

FOCUS

- Phaser 3
- Godot 4
- TypeScript
- AI Prototyping
- Level Design
- Playtesting

SELECTED DESIGN & BUILD PROJECTS

Jellylight: Reef Rescue

🔗 Live Game

Puzzle / Casual · Ongoing · Solo Game Designer & AI-assisted Developer

Designed and built an ocean-themed puzzle PWA with **40 playable levels across two game modes**. Created the core loop, deterministic puzzle generation, level progression, daily and five-stage weekly challenges, economy/cosmetics, seasonal rewards and responsive feedback for short casual sessions. Used AI throughout design, implementation, debugging and content iteration.

FOCUS

- Puzzle Design
- Level Progression
- Economy & Rewards
- Live Challenges
- AI-first Build

2023 – 2024

2D Survival Multiplayer Web Game

Systems Design · Ongoing · Solo Game Designer & Developer

Designed and implemented a 2D action-survival experience around enemy-wave pacing, character choice, skills, effects and a **55-weapon progression system**. Connected loot, chests, inventory, shop and revive flows into a coherent retention loop, with multiplayer sessions and responsive desktop/mobile controls.

FOCUS

Systems Design

Progression & Loot

Combat Pacing

Game UX

Phaser 3

Tranver

Company Project · Ongoing · Team of 4

Translated complex requirements for an enterprise AI workforce platform into production-ready user flows and interfaces across **7+ product areas**. Used AI-assisted implementation to iterate quickly across onboarding, AI chat, 3D workspace, marketplace, reports, wallet and administration within a four-person team.

CDHC — Con Đường Hữu Cơ

Company Project · 03/2026 – 07/2026 · Team of 5

Designed and implemented production user flows for a community commerce ecosystem serving **five user roles**. Delivered **eight core workflows** spanning shopping, orders, QR pickup, referral/cashback, inventory, content, events and messaging—experience directly transferable to multi-system game economies and role-based UX.

CORE COMPETENCIES

- Puzzle & Casual Design
- Core Loops & Mechanics
- Level Design
- Difficulty Curves
- Progression & Economy
- Game UX/UI
- AI Rapid Prototyping
- GDD & Feature Specs
- Playtesting & Balancing
- Cross-functional Collaboration
