TECHNICAL SKILLS

GAME ENGINES

- Phaser 3
- Godot 4
- GDScript

LANGUAGES

- TypeScript
- JavaScript
- HTML5
- CSS3

FRONTEND

- React
- Next.js
- Vite
- Firebase

TOOLS

- Git
- GitHub
- Figma
- Postman
- VS Code
- Cursor

AI-ASSISTED WORKFLOW

- Codex
- ChatGPT
- Claude

EDUCATION

Hanoi Open University
Electronics & Telecom Engineering
2018 – 2023

Aptech Việt Nam
International Software Engineering
2023 – 2024

CERTIFICATIONS

- TOEIC 750/990
2025
- Aptech Intl. Software Engineering
2024

LANGUAGES

- Vietnamese
- English

CAREER OBJECTIVE

To grow as an **AI-assisted Front-end and Game Developer**, using modern AI tools to turn product requirements into working interfaces and playable experiences. I seek a collaborative team where I can strengthen my technical fundamentals while contributing through rapid implementation, testing, debugging and continuous iteration.

PROFESSIONAL SUMMARY

AI-assisted developer with hands-on experience delivering production web interfaces and playable 2D games. Use **Codex, ChatGPT and Claude** throughout implementation, code exploration, debugging and iteration, while validating results through manual testing, builds and live deployments. Familiar with React, TypeScript, Phaser, API integration and real-time user experiences.

WORK EXPERIENCE

AI-assisted Game Developer — Phaser / Godot

TNG Technology, Media & AI Co., Ltd

08/2025 – Present

- Implement and iterate 2D game features for Web and Mobile with Phaser 3 and Godot, supported by AI coding tools.
- Turn gameplay and UI requirements into working mechanics, levels, interfaces and animations.
- Use existing patterns and AI guidance to develop save/load, inventory, quest and progression features.
- Test builds on browsers and mobile devices, investigate issues and iterate on performance and usability.
- Integrate third-party SDKs, analytics and in-game advertising by following technical documentation.
- Collaborate with Designers, Artists and QA, responding to feedback throughout development.

- STACK
- Phaser 3
 - Godot 4
 - TypeScript
 - JavaScript
 - HTML5
 - Git

FEATURED PROJECTS

Tranver

Live Website

Company Project · Ongoing · Team of 4

AI-assisted Front-end Implementation for an AI workforce platform where businesses build multi-department AI teams, chat with agents using company documents and assign tasks. Used Codex, ChatGPT and Claude to implement and refine responsive bilingual screens across onboarding, SSE chat, 2D/3D office, skills marketplace, team administration, reports and wallet features.

- STACK
- React 19
 - TypeScript
 - TanStack
 - Three.js / R3F
 - SSE

CDHC — Con Đường Hữu Cơ

Live Website

Company Project · 03/2026 – 07/2026 · Team of 5

AI-assisted Front-end Implementation across a multi-role community commerce ecosystem for customers, suppliers, partners, community stations and administrators. Implemented and debugged shopping, orders, QR pickup, referral/cashback, inventory, content, events and messaging interfaces, following existing API contracts and project patterns with PWA/Capacitor support.

- STACK
- React 19
 - TypeScript
 - Vite / Turborepo
 - TanStack Query
 - Capacitor / PWA

2D Survival Multiplayer Web Game

Live Demo

Personal Project · Ongoing · Solo Developer

Personal 2D action-survival game developed iteratively with AI coding assistance. Implemented playable multiplayer rooms, Firestore friend invitations, Google sign-in, character selection, enemy waves, a 55-weapon system, skills and effects, loot/chests, inventory/shop, revive flow, responsive HUD and desktop/mobile controls; tested changes through repeated local and live builds.

- STACK
- Phaser 3
 - JavaScript
 - Matter Physics
 - Firebase Auth / Firestore
 - Cloudflare Workers
 - Webpack

Tic Tac Toe - Real-time Web Game

Live Demo

GitHub

Created a learning-focused real-time Tic Tac Toe project with Vue and NestJS using AI guidance and technical documentation. Implemented room-ID joining, automatic X/O assignment, turn and winner checks, Socket.IO board updates, replay/leave actions and disconnect handling, then deployed the frontend and backend for live testing.

- STACK
- Vue 3
 - TypeScript
 - NestJS
 - Socket.IO
 - MongoDB

CORE COMPETENCIES

- AI-assisted Implementation
- UI Implementation
- Gameplay Implementation
- API Integration
- Manual Testing & Debugging
- Responsive UI
- Documentation-driven Work
- Git Workflow
- Team Collaboration
- Continuous Learning
